 in North America

Checchi & Magli

10 Reasons Farmers Prefer

the **FoxDrive** pocket/finger-type planter
for bare root OR plug
over the competition

- Innovative
- Dependable
- More Consistant
- Greater Precision
- Built to Last
- Faster

1 Deeper planting. Better stand. Tighter packing.
In side-by-side comparisons with other brand transplanters, farmers say they can look over their crop and see where they planted with the C&M. Plants are healthier, stronger, and noticeably ahead.

2 Cast iron shoe/sword- lasts longer!

3 Adjustable plant depth control

4 The weight of the operator rides on the tool bar and does not effect the planting

5 Consistent plant to plant spacing (no skipping/slippage) our packing wheels pack and our drive wheels drive

6 15 grippers for greater speed (optional 10 or 20) Increases efficiency. Decreases misses.

7 Grippers/packing wheels set plant straight up in the ground

8 Heavy-duty "80" roller chain

9 Each row has a parallelogram for constant planting depth

10 Efficient! Over 4,400 plants per hour per row! (based on 2 people/row)
